1. Why We Use Raised Beds For Our Annual Crops

"I have to admit that I was a reluctant convert to raised bed gardening. I grew up gardening in tilled soil and I loved it. I loved the smell of freshly turned dirt and I enjoyed plowing and rotortilling. I always grew good crops

that way and well, "if it ain't broke...don't fix it" has been my motto. Then we moved our family and cattle herd to the St. Lawrence valley, in the Thousand Island region of northern NY. The new farm lays very low and the soil is heavy clay.

be extremely helpful moving forward in many ways.

Being able to record how much you produced at the end of the year based on how much you planted will aid you in determining if you need to plant more for the following year to fill your pantry shelves. Documenting how you got rid of certain pests

and what worked best for your soil is also helpful."
