Prep Blog Review: 5 More Tips For Your Livestock

We've talked about gardening on our previous <u>Prep Blog Review</u>, and now we are focusing on taking care of your livestock too. Once the weather gets warmer it's the perfect time to start cleaning their spaces and think of adding up to your existing farm animals.

So, with that in mind, let's look at five articles on this topic we found for you these days!

1. How To Attract Barn Owls (And Keep Your Homestead Rodent-Free)

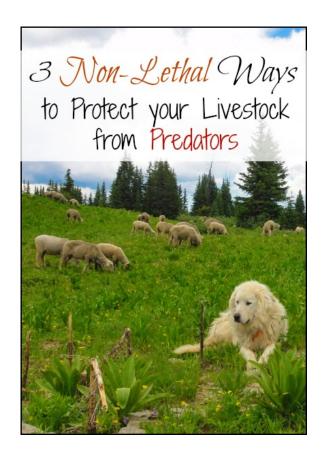

"Rodents in your fields and gardens can decimate your crop, and their resilience and numbers make them hard to eliminate. Enter your new best friend: an owl. Owls love to eat rodents, mice, rats, voles and

sometimes larger animals like moles. A nesting owl is a killing machine, storing dozens of dead rodents in preparation for incubating the eggs.

Barn owls don't build their own nests, however; they look for sheltered places to roost and nest. Traditionally invited into barns, today's owls rely on natural crevices and man-made boxes to find a place to hatch and rear young."

2. 3 Non-Lethal Ways to Protect Your Livestock from Predators

"Losing your livestock to predators is expensive, frustrating, and flat out heartbreaking — and protecting them isn't always the easiest of tasks.

While you may be tempted to break out your shotgun, there are numerous non-lethal steps you can take to keep your animals safe. Join us for this guest post!

Guardian Animals

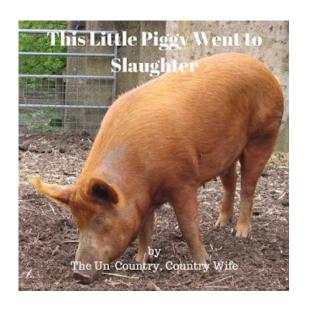

Guardian animals are one of the oldest forms of livestock protection. While dogs tend to be the most common guardian animals, llamas and donkeys are also popular choices.

<u>Dogs</u>

Guardian dogs are raised from puppyhood with the animals they are meant to protect. Certain breeds are commonly used, such as the Akbash or Great Pyrenees — however, not all dogs within those breeds are suitable."

3. This Little Piggy Went to Slaughter

"It is always a joy whenever my wife writes for the blog. She doesn't do it often, but when she does it is always from a viewpoint that either I haven't considered or is presented in a way that just touches people that I normally can't. I really appreciate the fact that she is so supportive of my crazy idea about writing and recording podcasts. It is just one

way that I believe we can help others that are on the same journey as we are toward a more sustainable life. I find it really sad that there are so many couples out there that don't take an interest in each others passions. Life is always fuller when you have an engaged partner.

Without any further delay, I present to you my wife, the Uncountry Country Wife and This Little Piggy Went to Slaughter."

4. How To Keep Poultry Through The Winter

"Are there certain steps that should be taken to keep poultry through the winter?

Making sure that your poultry flocks are happy and healthy through the winter will ensure that they reach the spring and prime egg laying time in top conditions. What types of things should you be looking for, and how warm do they need to be?

<u>Winterizing The Coop</u>

Ideally, winterizing the coop should have been done in the fall. Making sure the structure and roof were solid and that any holes were repaired is best accomplished in the fall, during nicer weather."

5. Alaskan Chicken Coop 24×10

"Hi All!! I just wanted to add in some Coop photos. Our Chicken house is close to being completed. The actual chicken area is 10×16, it also has a feed room/egg access doors in a 4×10 area, and a 4×10 front porch.

We started building the coop in the shop.

Two coats of paint. We used yellow because we had accidentally bought the wrong color last fall and didn't end up using it in the house. So it was just sitting around"
