

VIDEO: How to Respond to Radiation Exposure

Radiation exposure can wreak havoc on the human body. Regardless of the level of exposure, it's most definitely something that no one wants to deal with as it can cause genetic deterioration, organ failure, and death. However, in an SHTF situation, radiation exposure may very well be a condition that must be addressed.

In this video, Tyler previews the radiation exposure protocols that the book [*Survival MD: What to Do When There's No Doctor*](#) explains. From information on waiting out the initial fallout to the proper way to perform exposure protocols, you don't want to miss this video.

Even if you have a shelter that protects you from that highest level of radiation during the fallout, you might need to help someone that wasn't so lucky. Tyler outlines the steps for isolation, cleaning, and treatment for radiation exposure. He explains how any particulate, even dust that isn't visible, can still be radioactive and therefore damaging to the patient and anyone that comes into contact with them.

Tyler also explains that while the visible symptoms of radiation exposure can mimic common burns, the two conditions are treated in entirely different fashions. Not only that but applying ointments, as you would with a conventional burn, can trap radiated molecules next to the skin and cause further exposure.

Survival MD: What to Do When There's No Doctor also offers guidance on how different levels of exposure affect the body. Tyler also offers some advice on medication and equipment to have on hand in case you ever have to address the after-

effects of nuclear fallout and radiation exposure.

Of course, we all hope that this knowledge is never put to the test, and we never need to open that bottle of radiation exposure medication. However, if the unspeakable were to happen, the information provided in *Survival MD: What to Do When There's No Doctor* may save your life or that of someone else.
