

VIDEO: How to Use Wax to Upgrade your Backpack

Keeping your gear dry in a survival situation could mean the difference between a quiet night by the fire or freezing to death so having a waterproof pack is of the utmost importance. But if you're not that inclined to spend a lot for a backpack with all the bells and whistles, Jason's here with a homebrew trick to improve what you already have.

In In this video Jason shows off some of the backpacks he made for himself, but also a very important technique using wax and linseed oil to improve your backpack's capacity to stay dry, but also its durability.
