

[VIDEO] Pocket Survival Kit (PSK) – Part 1 – Tools

Always wondered what you should include in your go-to survival kit? Wondered how you could ensure your survival without lugging around a gym-bag worth of stuff? Sure, you could keep a chest full of gear in your trunk or carry an army ruck, but at some point you'll have to leave your car and carrying everything everywhere isn't exactly practical. Your solution is a Pocket Survival Kit (PSK).

A Pocket Survival Kit should pack a minimum of survival gear into a package small enough to carry comfortably on your person so you will have it on hand when you need it most. It should provide as much protection as possible in as little space as possible.

Cache Valley Prepper's here with a 12-part series to teach you how to build your own and what exactly to include in it so you're sure you're never caught lacking.
